Thesis project available at Halo Genomics

We are offering a master's thesis project in information technology during the spring term of 2011.

Halo Genomics AB

Halo Genomics (formerly Olink Genomics) is a provider of innovative technology for sample preparation in next-generation sequencing. Halo Genomics is based in Uppsala, Sweden, the company's products are offered to a wide range of academic, government, pharmaceutical, biotechnology, and other leading institutions around the world.

For more information, see www.halogenomics.com.

The project

The project aims to develop an information system for managing our production documentation. The project will involve data modelling, database design, web interface design, implementation, testing, and documentation. The system will be deployed on our intranet and be accessible primarily via a web interface. The system will use MySQL for data storage, and PHP and/or Java (JSP/Servlets) for presentation.

Knowledge and/or experience of MySQL, Eclipse IDE, PHP, XML, and Java (particularly JSP/Servlets) is recommended.
