2011-04-19

Summer worker positions at AstraZeneca R&D, Södertälje.

We are looking for 2 students that would like to come and work for us during the summer of 2011. The work is about digitalizing graphs, tables and text from scientific papers and study reports in the clinical domain. The numerical values in these documents need to be labeled using controlled terminology, representing things like time, treatment and measurement procedures.

Undergrad students with experience of statistics and/or biomedicine are preferred, as well as informatics. Send a short letter and your Curriculum Vitae by e-mail to the contact details below, as soon as possible. The same goes for any questions you may have.

Given that you have a Swedish "F-skattesedel" you are more likely to be successful applicants – please state so in your letter/CV. Continuation on a part time basis during autumn may be possible.

Looking forward to work with you

Anders Bresell
Senior Informatics Scientist
