Time to sharpen your profile?

Take a course where you strengthen your ability to work interdisciplinary in new ways and co-create new solutions for tomorrow's health challenges.

Health innovation, an interdisciplinary approach 5 hp. This is the course for you with interest in learning about health innovations. The course targets students and practitioners from different fields with at least a bachelor's degree. The course will run almost once a week in late afternoons from February until May 2020. We learn how to create interdisciplinary teams and how to manage beneficiary's participation. We create and develop health innovations through a design process. We also learn about legal and ethical challenges and how to protect and fund health innovations.
