### New in the Department

**Tom Liffen** is going to start a 2-year post-doc together with Sebastian. He will investigate the effects of forest clear-cutting on carbon burial and greenhouse gas production in lake sediments. His project will be conducted in cooperation with the Umeå University.

**Elias Broman** will do a research internship with Sebastian during the summer and start in September to work on his Master thesis about sedimentation and greenhouse gas emission in the Skogaryd catchment in southwest Sweden.

**Inessa Lacativa**, a PhD student from São Paulo, Brazil is working in a project together with Stefan Bertilsson and Alexander Eiler studying the role of lectins in physical associations between bacteria and algae.
