Title (English) Laboratory information system for pharmacological data - Automated reporting feature		
Title (Swedish)		
Abstract <p>Development of cancer drugs is usually done in a highly automated process generating large amounts of data for potential drugs. The data is managed in a Laboratory Information System for processing and evaluation. Studying dose-response relationships is central in determining effective levels of dosages for these drugs. This degree project involved the implementation of various reports to study the dose-response relationship, as well as preparing a general system for data extraction to 3rd party applications from the Laboratory Information System.</p>		
Keywords Laboratory information system, reporting, IC ₅₀ , dose-response, data extraction, survival index
