Title (English) Are dendritic cells the missing link in IgE-mediated enhancement of CD4⁺ T cell proliferation?		
Title (Swedish)		
Abstract <p>To be able to find better treatments and cures against IgE-mediated allergies and asthma, the mechanism behind these diseases has to be clarified. Mice immunized with IgE-antigen complexes have previously been reported to have an enhanced antigen specific T cell proliferation compared to mice immunized with antigen alone. This study suggests a novel model for this mechanism, where dendritic cells are required for an IgE-mediated enhancement of CD4⁺ T cell proliferation.</p>		
Keywords <p>IgE, T cell proliferation, dendritic cells</p>
